RATINGS³

Morningstar™ Overall Rating: ★★★★★

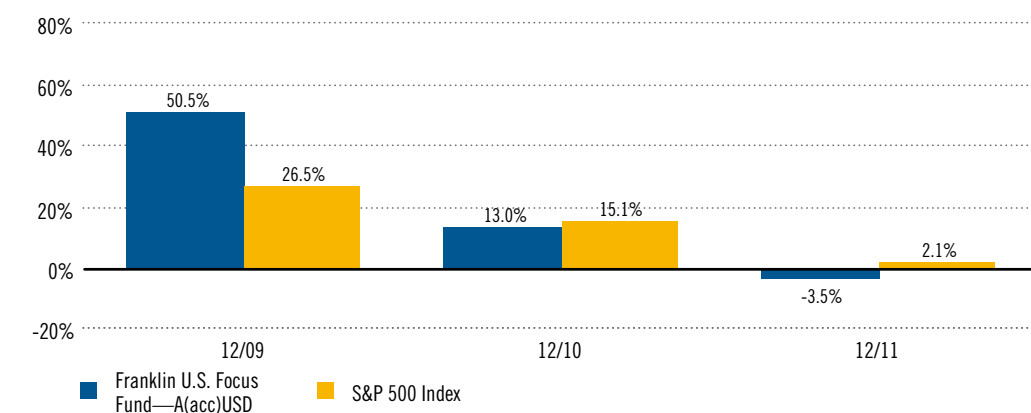

INVESTMENT OBJECTIVE

The Fund aims to achieve long-term capital appreciation by investing primarily in a diversified portfolio composed of equity securities of large capitalisation companies, which are companies similar in size to those in the S&P 500 Index, including common and preferred stocks, which (i) have their registered office in the United States and/or (ii) have their principal business activities in the United States and/or (iii) are holding companies holding principally participations in companies incorporated in the United States.

GLOSSARY

Alpha: Alpha measures the difference between a fund's actual returns and its expected returns given its risk level as measured by its beta. A positive alpha figure indicates the fund has performed better than its beta would predict. In contrast, a negative alpha indicates a fund has underperformed, given the expectations established by the fund's beta. Some investors see alpha as a measurement of the value added or subtracted by a fund's manager.

Benchmark: An unmanaged group of securities whose overall performance is used as a standard to measure investment performance.

Beta: A measure of the magnitude of a portfolio's past share-price fluctuations in relation to the ups and downs of the overall market (or appropriate market index). The market (or index) is assigned a beta of 1.00, so a portfolio with a beta of 1.20 would have seen its share price rise or fall by 12% when the overall market rose or fell by 10%.

Correlation: A measure of the degree to which the price trends of various investment categories or instruments move in the same direction. The correlation quantifies the strength of the relationship as a figure between -1 and +1. The closer the coefficient is to 1, the stronger the correlation. If the coefficient is -1, the investments and the benchmark move in opposite directions. If the value is 0 there is no correlation.

Dividend Yield: A Dividend is a payment of cash or stock from a company's earnings to each stockholder as declared by the company's board of directors. A dividend yield is a snapshot of interest and dividend income from a fund. The yield, expressed as a percentage of the fund's net asset value, is based on income earned over the past 30 days and is annualised for the coming year.

Information ratio: In investing terminology, the ratio of expected return to risk. Usually, this statistical technique is used to measure a manager's performance against a benchmark. This measure explicitly relates the degree by which an Investment has beaten the Benchmark to the consistency by which the Investment has beaten the Benchmark.

Market capitalization: A determination of a company's value, calculated by multiplying the total number of company stock shares outstanding by the price per share.

Price-to-book value (P/BV): The price per share of a stock divided by its book value (i.e., net worth) per share. For a portfolio, the ratio is the weighted average price/book ratio of the stocks it holds.

Price/cash flow (P/CF): Supplements price/earnings ratio as a measure of relative value; represents a weighted average of the price/cash flow ratios for the underlying fund holdings.

Price/earnings ratio (P/E): The share price of a stock, divided by its per-share earnings over the past year. For a portfolio, the weighted average P/E ratio of the stocks in the portfolio. P/E is a good indicator of market expectations about a company's prospects; the higher the P/E, the greater the expectations for a company's future growth in earnings.

R-squared: A measure of how much of a portfolio's performance can be explained by the returns from the overall market (or a benchmark index). If a portfolio's total return precisely matched that of the overall market or benchmark, its R-squared would be 1.00. If a portfolio's return bore no relationship to the market's returns, its R-squared would be 0.

Sharpe ratio: A measure of risk-adjusted return. To calculate a Sharpe ratio, an asset's excess returns (its return in excess of the return generated by risk-free assets such as Treasury bills) are divided by the asset's standard deviation.

Standard deviation: A measure of the degree to which a fund's return varies from its previous returns or from the average of all similar funds. The larger the standard deviation, the greater the likelihood (and risk) that a security's performance will fluctuate from the average return.

Tracking error: Measure of the deviation of the return of a fund compared to the return of a benchmark over a fixed period of time. Expressed as a percentage. The more passively the investment fund is managed, the smaller the tracking error.

Volatility: The degree of fluctuation in the value of a security, mutual fund, or index, volatility is often expressed as a mathematical measure such as a standard deviation or beta. The greater a fund's volatility, the wider the fluctuations between its high and low prices.

IMPORTANT INFORMATION AND DISCLAIMERS

1. Performance data may represent blended share class performance e.g. hybrid created from an A(dis) share class which was converted to A(acc). Performance figures represent the aggregate total return for the period indicated assuming, where relevant, the reinvestment of dividends and distributions. Performance figures assume reinvestment of dividends. Performance figures above are for A(dis) shares, except where only A(acc) shares are available, then A(acc) performance is shown. S&P sector average represents the Luxembourg universe. The performance data does not take account commissions and/or costs incurred on the issue and redemption of the shares. 2. Chart performance figures are rebased to 100 at the Fund's inception date. 3. Copyright - © 2011 Morningstar, Inc. All Rights Reserved. Morningstar Rating™ as of 31 December 2011, in the US Large-Cap Blend Equity Morningstar Category™. 4. Copyright - © 2011 Morningstar, Inc. All Rights Reserved.
