What are the Key Risks?

The value of shares in the Fund and income received from it can go down as well as up and investors may not get back the full amount invested.

Performance may also be affected by currency fluctuations. Currency fluctuations may affect the value of overseas investments.

The Fund invests mainly in debt securities issued by any type of entity located in Gulf Cooperation Council (GCC) member countries. Such securities have historically been subject to price movements, generally due to interest rates or movements in the bond market. As a result, the performance of the Fund fluctuates moderately over time.

The Fund may distribute income gross of expenses. Whilst this might allow more income to be distributed, it may also have the effect of reducing capital.

Other significant risks include: credit risk, currency risk, emerging markets risk, derivatives risk, liquidity risk.

For full details of all of the risks applicable to this Fund, please refer to the "Risk Considerations" section of the Fund in the current prospectus of Franklin Templeton Investment Funds.

Top Ten Holdings: These securities do not represent all of the securities purchased, sold or recommended for clients, and the reader should not assume that investment in the securities listed was or will be profitable. The portfolio manager for the Fund reserves the right to withhold release of information with respect to holdings that would otherwise be included in the top holdings list.

Fund Measures: The average credit quality (ACQ) rating may change over time. The portfolio itself has not been rated by an independent rating agency. The letter rating, which may be based on bond ratings from different agencies (or internal ratings for unrated bonds, cash and equivalents), is provided to indicate the average credit rating of the portfolio's underlying investments and generally ranges from AAA (highest) to D (lowest). For unrated bonds, cash and equivalents, ratings may be assigned based on the ratings of the issuer, the ratings of the underlying holdings of a pooled investment vehicle, or other relevant factors. The ACQ is determined by assigning a sequential integer to all credit ratings AAA to D, taking a simple, asset-weighted average of investments by market value and rounding to the nearest rating. The risk of default increases as a bond's rating decreases, so the ACQ provided is not a statistical measurement of the portfolio's default risk because a simple, weighted average does not measure the increasing level of risk from lower-rated bonds. The ACQ may be lower if cash and equivalents are excluded from the calculation. The ACQ is provided for informational purposes only. Derivative positions are not reflected in the ACQ.

TER: A fund's Total Expense Ratio (TER) is a measure of its total costs and fees expressed as a percentage of the average net assets of the fund in the previous financial year and with reference to the asset class shown in the performance table. As of 31 January 2019. Calculation method according to Luxembourg law. The TER as of fiscal year-end is published in the latest available annual report and the latest semi-annual report, if published thereafter, for Switzerland and is calculated according to SFAMA guidelines.

Distribution of Dividends: The Board of Directors intends to distribute all of the income attributable to the Distribution Shares. No distribution of dividends shall be made for the Accumulation Shares (**acc**), however the income attributable will be reflected in the increased value of the Shares. Dividends may be paid monthly (**Mdis**), quarterly (**Qdis**), or annually (**Ydis**).
