What are the Risks?

The Fund does not offer any capital guarantee or protection and you may not get back the amount invested. The Fund is subject to the following risks which are materially relevant: **Credit risk:** the risk of loss arising from default that may occur if an issuer fails to make principal or interest payments when due. This risk is higher if the Fund holds low-rated, sub-investment-grade securities. **Emerging markets risk:** the risk related to investing in countries that have less developed political, economic, legal and regulatory systems, and that may be impacted by political/economic instability, lack of liquidity or transparency, or safekeeping issues. **Shariah compliance risk:** the risk that the restriction to invest only in Shariah-compliant securities may place the Fund at a comparative disadvantage vs. funds that do not have this restriction. Returns to shareholders may also be reduced due to payments to Shariah approved charities to "purify" dividends. **Sukuk risk:** the risk of loss arising from investing in sukuk instruments, which may fluctuate in value due to the impact of macro-economic factors on the supply and demand for financing or the willingness or ability of the counterparty (sovereign, sovereign-related, or corporate) to make payments according to the terms of the Sukuk. Complete information on the risks of investing in the Fund are set out in the Fund's prospectus.

Glossary

Yield to Maturity ('YTM'): is the rate of return anticipated on a bond if it is held until the maturity date. YTM is considered a long-term bond yield expressed as an annual rate. The calculation of YTM takes into account the current market price, par value, coupon interest rate and time to maturity. It is also assumed that all coupons are reinvested at the same rate. Yield figures quoted should not be used as an indication of the income that has or will be received. Yield figures are based on the portfolio's underlying holdings and do not represent a payout of the portfolio. **Yield to Maturity is calculated without the deduction of fees and expenses.** **Ongoing Charges Figure (OCF):** The Ongoing Charges Figure (OCF) includes the fees paid to the management company, the investment manager and the depository, as well as certain other expenses. The OCF is calculated by taking the relevant main material costs paid out over the 12-month period indicated and dividing them by the average net assets over the same period. The OCF does not include all expenses paid by the fund (for example, it does not include what the fund pays for buying and selling securities). For a comprehensive list of the types of costs deducted from fund assets, see the prospectus. For recent all-in annual costs, as well as hypothetical performance scenarios that show the effects that different levels of return could have on an investment in the fund, where applicable, see the KID. For funds that lack 12 months of data, or for which OCF is not likely to give a fair idea of likely future costs, the figure shown is an estimate. **Comparator:** Benchmark is used for comparing Fund performance, but is not a constraint to Fund Investment. **Average Credit Quality:** The average credit quality reflects the holdings of the underlying issues, based on the size of each holding and ratings assigned to each based on rating agency assessments of its creditworthiness. **Weighted Average Maturity:** An estimate of the number of years to maturity, taking the possibility of early payments into account, for the underlying holdings. **Effective Duration** is a duration calculation for bonds with embedded options. Effective duration takes into account that expected cash flows will fluctuate as interest rates change. Duration measures the sensitivity of price (the value of principal) of a fixed-income investment to a change in interest rates. The higher the duration number, the more sensitive a fixed-income investment will be to interest rate changes.

Portfolio Data Information

Credit Quality is a measure of a bond issuer's ability to repay interest and principal in a timely manner. The credit ratings shown are based on each portfolio security's rating as provided by S&P Global Ratings, Moody's Investors Service and/or Fitch Ratings, Inc. and typically range from AAA (highest) to D (lowest), or an equivalent and/or similar rating. For this purpose, the manager assigns each security the middle rating from these three agencies. When only two agencies provide ratings, the lower of the two ratings will be assigned. When only one agency assigns a rating, that rating will be used. Foreign government bonds without a specific rating are assigned a country rating, if available. Securities that are unrated by all three agencies are reflected as such. The credit quality of the investments in the portfolio does not apply to the stability or safety of the portfolio. The methodology used for the calculation of credit quality ratings displayed may differ from the methodology for monitoring investment limits, if applicable. **Please note, the portfolio itself has not been rated by an independent rating agency.**

The investment activities will be undertaken in accordance with the Shariah Guidelines. As a consequence, the performance of a Fund may possibly be lower than other investment funds that do not seek to strictly adhere to the Islamic investment criteria. The requirement to "purify" cash holdings or dividend income will likely result in payments being made to charities. The return to investors will be reduced by the amount of such payments.
